

Nexus Telecom Launches NexusVERIFIER, for Simulation, Testing and Analysis of LTE Wireless, Wireline and Fixed Networks - for Improved Customer Experience and Profitability

Zurich, Switzerland - June 12th 2009

NexusVERIFIER - a unique centralized service verification test solution for simulating real subscribers for any service provider across any network.

Leading OSS/BSS vendor of sophisticated state-of-the-art telecom management service and revenue assurance solutions, Nexus Telecom has announced that it will launch NexusVERIFIER at CommunicAsia 2009. NexusVERIFIER is an active test solution for simultaneous execution of numerous test campaigns across a multitude of network technologies and service applications from a single point in your core network. CommunicAsia, Asia's largest Communications & IT event, is scheduled to be held at Singapore Expo in the Republic of Singapore from 16-19 June 2009.

With the continuous roll-out of new mobile-based applications and content services, customer service expectations are also increasing. Nobody wants to trade on the service quality they've come to expect, and with the introduction of innovative market strategies such as flat rates, maintenance and service level agreements, subscribers sooner change providers than compromise coverage, accessibility or audio quality.

NexusVERIFIER continuously and proactively analyzes service performance, so service providers can find and solve service issues before their customers even notice any service or quality degradation. Executing multiple simultaneous test campaigns across all locations in your network from a central location, NexusVERIFIER's unique configuration focuses on your network service quality and performance - not coverage - utilizing its full resources to test your services without consuming valuable air time.

Whether assuring Roaming, IVR, VoIP, Mobile Data or Mobile Voice services or stabilizing revenue streams, NexusVERIFIER helps ensure your Quality of Service, prevent operator hopping and secure your venues. Moreover, Nexus Telecom maintains the launch of NexusVERIFIER provides a comprehensive test solution at a reduced total cost of ownership.

"The combined benefit of conducting numerous test campaigns from a central point in the network without utilizing valuable air resources constitutes a significant savings in test resources," says Christoph Kupper, VP of Marketing at Nexus Telecom, Switzerland. "but the continuous active testing of services clearly shows which transactions succeed - and which don't - providing a real competitive advantage is so far as you can extrapolate the quality of service and both better prioritize and direct traffic. With operators everywhere having to deal with new and unknown service providers, NexusVERIFIER test results can be used to select preferred partners and applications to get that extra edge."

Nexus Telecom will be exhibiting in Singapore Expo at booth No. 4G1-07.

About Nexus Telecom

Founded in 1994, Nexus Telecom (www.NexusTelecom.com) is a privately held company with its headquarters in Zurich, Switzerland and subsidiaries in Canada (NA), Chile (CALA), Pakistan (ME), South Africa (SA) and China. With over 200 employees, Nexus Telecom is a major OSS/BSS vendor delivering sophisticated state-of-the-art telecom management, testing and billing solutions to 2G, 3G, LTE, NGN, VoIP and PSTN service providers and network operators worldwide.

Nexus Telecom specializes in Service Assurance, Revenue Assurance and Network/Service Testing solutions, supporting the most recently developed technologies and standards. With solutions deployed in over 100 countries, Nexus Telecom's installed customer base spans the globe, assuring service quality and revenue streams for many of the world's best-known telecom operators.

For small and large service providers alike, including the world's largest GSM/UMTS network operated by T-Mobile, the highly scalable and modular end-to-end solutions from Nexus Telecom maximize the service provider's competitive edge through excellent ROI, quick and smooth launch of new services, and greatly increased end-customer satisfaction.
