Nexus Telecom Newsletter

Dear Reader,

Quality of Service and Customer Experience are key competitive issues in next generation telecommunications areas such as NGN and IMS. But these topics are also equally relevant to other business areas, such as railway communications (GSM-R), banking and industry.

Customers from a growing range of business areas are taking an interest in Nexus Telecom, our solutions and our applications. What about you? What is it that we can do for you? I would like to personally invite you to meet us at the TeleManagement World event in Nice, France - or at any other upcoming event - to discuss mutual challenges and opportunities.

Yours sincerely,
 Thomas Sutter
 CEO Nexus Telecom

News Stories

NexusNETVIEW: ECTS Monitoring for GSM-R Networks

Wireless GSM communication is traditionally used in person-to-person communication. This standard has now been adopted and extended for deployment as a secure platform for voice and data communication between railway operational staff. This GSM-R standard has been selected by many countries around the world, including the European Union.

Nexus Telecom has been invited to act as a supplier of QoS Monitoring solutions for such GSM-R network infrastructures. The NexusNETVIEW solution suite offers vital features for railway communications, ultimately focussing on increasing safety and security for railway passengers and staff.

CommunicAsia 2007, 19 - 22 June 2007, Singapore

Committed to offering OSS solutions in Asia, Nexus Telecom is exhibiting at this annual event in Singapore. Visit us at our booth Nr. L1-07 in Hall 4 and find out what we can do for you. » [more](#)

New generation of OSS systems to assure quality-of-experience of triple play IMS Services

In a feature article in [Global Telecoms Business](#), Thomas Sutter (CEO of Nexus Telecom), talks about QoE for IMS

services. Assuring high service quality in triple play IMS networks is becoming exponentially more difficult than in traditional SS7 circuit switched networks. Why? Far more complex technologies, many more different interfaces, higher magnitudes of transaction message volumes, more potential points of error, and less transparency in root cause analysis. So? The requirements for an appropriate new generation OSS system for monitoring and diagnostic purposes just became substantially more challenging.
